

## Measure Your Feet For Yukon Boots

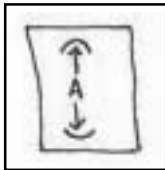

---

\*Wear your socks for all measurements:  
stand on a piece of paper and hold a pencil or pen vertical while you trace an arc around your toes and heels

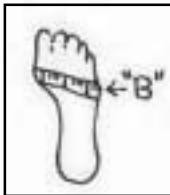

### *It's as easy as A, B, C*

**A.**

Now measure the distance very accurately between the two arcs.  
This is measurement "A"

**B.**

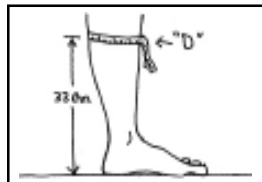

Now Measure the circumference around the widest part of your forefoot. This would include the bases of your large and small toes.

**C.**

Now please measure the circumference of your instep, or "arch," the distance around the highest part of your foot.

**D.**

For measurement "D" please measure from the floor up your leg 33 cm or 13 inches and measure the circumference of your calf."

Measurements may be in inches or centimeters.  
Please email measurements "A," "B," "C," and "D" to me along with your Paypal payment of \$550 (which includes shipping to North America) to:  
vangorkomboots@gmail.com. Canadians add HST of \$66 for a total of \$616.

Thank you.
